SUMMARY

Aspiring Machine Learning Engineer with hands-on knowledge of Python and database systems (MySQL, MongoDB). Building responsive cross-platform architectures, deploying containerized AI applications, and integrating persistent data pipelines. Adept at using GitHub, Postman, and AWS cloud tools with commitment to open-source contributions and mastering Generative AI workflows.

TECHNICAL PROJECTS

Ceres AI • [GitHub](#) | [DockerHub](#)

- Architected and deployed an end-to-end cloud-native geospatial pipeline that automatically ingests multi-spectral satellite imagery via Google Earth Engine API to generate pixel-perfect, 10-meter resolution crop health maps for precision agriculture.
- Containerized the entire machine learning and raster operations workflow using Docker, configuring seamless volume mounts for secure Earth Engine API credential management, reducing cloud deployment setup time by 40%.

Customer Churn Predictor • [GitHub](#) | [DockerHub](#) | [Live](#)

- Developed and deployed an end-to-end customer churn prediction application utilizing a Logistic Regression model that achieved 82% accuracy in forecasting consumer behavior based on demographics and service usage patterns.
- Engineered a production-ready Web API using Flask and Gunicorn to handle concurrent requests and serve real-time churn probability calculations, implementing automated preprocessing and feature engineering metrics.

Movie Recommendation System • [GitHub](#) | [DockerHub](#) | [Live](#)

- Engineered a content-based recommendation engine using Python, Pandas, and Scikit-Learn to calculate high-dimensional mathematical similarity across movie metadata, plot summaries, and text features for precise film matching.
- Built and optimized a real-time search and indexing interface capable of instantly filtering film datasets and computing vector similarities on-the-fly to deliver a seamless, low-latency user experience up to 73%.
- Containerized the entire application ecosystem via Docker, packaging cross-platform dependencies into a streamlined production image (the-movie-recommender:general) to achieve zero-setup local deployment.

TECHNICAL SKILLS

Languages & Frameworks:	Python, Basics(JavaScript, HTML, CSS)
Data Science & ML Lib :	NumPy, Pandas, Streamlit, Scikit-Learn
Databases:	MySQL, MongoDB
Tools & Cloud:	AWS, Git, GitHub, Docker, Postman
AI Tools:	Antigravity CLI, Claude Code, Ollama, Codex
UI/UX & Design:	Figma, Notion, Canva
Soft Skills:	Adaptability, Communication, Collaboration

EXPERIENCE & INVOLVEMENT

Open-Source Contributor | *GirlScript Summer of Code (GSSoC)*

Aug 2025 – Oct 2025

- Contributed to open-source software codebases by reviewing pull requests, resolving codebase bugs, and collaborating with cross-functional developers.

EDUCATION

Baba Mastnath University	Master of Computer Applications (MCA)	(Pursuing)
Maharishi Dayanand University	Bachelor of Computer Applications (BCA)	(2022 – 2025)

CERTIFICATIONS

- AI Developer Program Issued by AMD AI Academy (June 2026)
- [Gen AI Academy](#) Issued by Google Cloud Skill Boost (August 2025)
